430 Rec'd PCT/PTO 28 APR 1999

Practitioner's Docket No. U 012229-2

PATENT

TRANSMITTAL LETTER TO THE U.S. DESIGNATED OFFICE (DO/US)--
ENTRY INTO THE U.S. NATIONAL STAGE UNDER CHAPTER I

INTERNATIONAL APPLICATION NO.	INTERNATIONAL FILING DATE	PRIORITY DATE CLAIMED
PCT/FI98/00712	11 SEPTEMBER 1998	15 SEPTEMBER 1997
TITLE OF INVENTION		09 DECEMBER 1997
FIRE FIGHTING APPARATUS		
APPLICANT(S)	GORAN SUNDHOLM	

Box PCT
Assistant Commissioner for Patents
Washington D.C. 20231
ATTENTION: DO/US

NOTE: The completion of those filing requirements that can be made at a time later than 20 months from the priority date results from the Commissioner exercising his judgment under the authority granted under 35 U.S.C. 371(d). The filing receipt will show the actual date of receipt of the last item completing the entry into the national phase. See 37 C.F.R. 1.491, which states: "An international application enters the national stage when the applicant has filed the documents and fees required by 35 U.S.C. 371(c) within the periods set forth in § 1.494 and § 1.495."

WARNING: Where the items are those that can be submitted to complete the entry of the international application into the national phase subsequent to 20 months from the priority date, the application is still considered to be in the international stage. And if mailing procedures are utilized to obtain a date the express mail procedure of 37 C.F.R. 1.10 must be used (because international application papers are not covered by an ordinary certificate of mailing. 37 C.F.R. 1.8(2)(xi)).

NOTE: Documents and fees must be clearly identified as a submission to enter the national stage under 35 U.S.C. 371, otherwise the submission will be considered as being made under 35 U.S.C. 111. 37 C.F.R. 1.494(f).

CERTIFICATION UNDER 37 C.F.R. 1.10*
(Express Mail label number is **mandatory**.)
(Express Mail certification is optional.)

I hereby certify that this paper, along with any document referred to, is being deposited with the United States Postal Service on this date APRIL 28, 1999, in an envelope as Express Mail Post Office to Addressee, "mailing Label Number EE734098589US addressed to the: Assistant Commissioner for Patents, Washington, D.C. 20231.

DANIELLE JOHNSON

(type or print name of person mailing paper)

Danielle Johnson

Signature of person mailing paper

WARNING: Certificate of mailing (first class) or facsimile transmission procedures of 37 C.F.R. 1.8 cannot be used to obtain a date of mailing or transmission for this correspondence.

*WARNING: Each paper or fee filed by "Express Mail" **must** have the number of the "Express Mail" mailing label placed thereon prior to mailing. 37 C.F.R. 1.10(b).
"Since the filing of correspondence under § 1.10 without the Express Mail mailing label thereon is an oversight that can be avoided by the exercise of reasonable care, requests for waiver of this requirement will **not** be granted on petition." Notice of Oct. 24, 1996, 60 Fed. Reg. 56,439, at 56,442.

TOTAL	Total Fees enclosed				\$ 485.00

****WARNING:** *"To avoid abandonment of the application, the applicant shall furnish to the United States Patent and Trademark Office not later than the expiration of 20 months from the priority date; *** (2) the basic national fee (see § 1.492(a)). The 20-month time limit may not be extended." 37 C.F.R. § 1.494(b).*

i. ☒ A check in the amount of \$ 485.00 to cover the above fees is enclosed.

ii. ☐ Please charge Account No. _____ in the amount of \$ _____.

(Transmittal Letter to the United States Designated Office (DO/US - Entry into National Stage
under 35 U.S.C. 371--page 2 of 7) **13-6**

A duplicate copy of this sheet is enclosed.

WARNING:

If the translations of the international application, oath or declaration and national fee have not been submitted by the applicant within twenty (20) months from the priority date, the applicant will be so notified and given a period of time within which to file the translation and/or oath or declaration in order to prevent abandonment. The payment of the surcharge set forth in § 1.492(e) is required as a condition for accepting the oath or declaration later than twenty (20) months after the priority date. The payment of the processing fee set forth in § 1.492(f) is required for acceptance of an English translation later than twenty (20) months after the priority date. Failure to comply with these requirements will result in abandonment of the application. The provisions of § 1.136 will apply. 37 CAR § 1.494(c); Notice of Jan. 7, 1993, 1147 O.G. 29 to 40, at 35.

3. A copy of the International application as filed (35 U.S.C. 371(c)(2)):

- a. ☐ is transmitted herewith.
- b. ☐ is not required, as the application was filed with the United States Receiving Office.
- c. ☒ has been transmitted
 - i. ☒ by the International Bureau. Date of mailing of the application From form PCT/IB/308): 25 MARCH 1999.
 - ii. ☐ by applicant on _____
Date

NOTE: Section 1.494(b) was amended to require that the basic national fee and a copy of the international application must be filed with the Office by 20 months from the priority date to avoid abandonment. "The International Bureau nominally provides the copy of the international application to the Office in accordance with PCT Article 20. At the same time, the International Bureau notifies the applicant of the communication to the Office. In accordance with PCT Rule 47.1, that notice shall be accepted by all designated offices as conclusive evidence that the communication has duly taken place. Thus, if the applicant desires to enter the national stage and applicant has received notice from the International Bureau, applicant need only pay the basic national fee by 20 months from the priority date." [This can now be paid subsequently with a surcharge.] Notice of Jan. 7, 1993, 1147 O.G. 29 to 40, at 35.

4. A translation of the International application into the English language (35 U.S.C. 371(c)(2)):

- a. ☒ is transmitted herewith.
- b. ☐ is not required as the application was filed in English.
- c. ☐ was previously transmitted by applicant on _____
Date

5. ☒ Amendments to the claims of the International application under PCT Article 19 (35 U.S.C. 371(c)(3)):

NOTE: The Notice of January 7, 1993 indicates that 37 C.F.R. § 1.494(d) was "amended to clarify the existing practice that PCT Article 19 Amendments must be submitted by 20 months from the priority date, which time may not be extended." This Notice further advises: "Of course, the failure to do so does not result in loss of the subject matter of PCT Article 19 amendments. The applicant may submit that subject matter in a preliminary amendment filed under Section 1.121. In many cases, filing an amendment under Section 1.121 is preferable since grammatical or idiomatic errors may be corrected." 1147 O.G. 29-40, at 35. See item 11(c) below.

- a. ☐ are transmitted herewith.
- b. ☐ have been transmitted
- i. ☐ by the International Bureau. Date of mailing of the amendment (from form PCT/IB/308): _____.
- ii. ☐ by applicant on _____ Date
- c. ☒ have not been transmitted, as
- i. ☐ no notification has been received that the International Search Authority has received the Search Copy.
- ii. ☐ the Search Copy was received by the International Searching Authority, but the Search Report has not yet been issued. Date of receipt of Search Copy from form PCT/ISA/202): _____.
- iii. ☒ applicant chose not to make amendments under PCT Article 19. Date of mailing of Search Report (from form PCT/ISA/210): _____
- iv. ☐ the time limit for the submission of amendments has not yet expired. The amendments, or a statement that amendments have not been made, will be transmitted before the expiration of the time limit under PCT Rule 46.1.
6. ☒ A translation of the amendments to the claims under PCT Article 19 (35 U.S.C. 371(c)(3)):
- a. ☐ is transmitted herewith.
- b. ☐ is not required as the amendments were made in the English language.
- c. ☒ has not been transmitted for reasons indicated at point 5(c) above.
7. ☒ An oath or declaration of the inventor (35 U.S.C. 371(c)(4)) complying with 35 U.S.C. 115
- a. ☐ was previously submitted by applicant on _____ Date
- b. ☒ is submitted herewith, and such oath or declaration
- i. ☒ is attached to the application.
- ii. ☐ identifies the application and any amendments under PCT Article 19 that were transmitted as stated in points 3(b) or (c) and 5(b); and states that they were reviewed by the inventor, as required by 37 C.F.R. 1.70.
- iii. ☐ will follow.

II. Other document(s) or information included:

8. ☒ An international Search Report or Declaration under PCT Article 17(2)(a):
- ☒ is transmitted herewith.
 - ☐ has been transmitted by the International Bureau. Date of mailing from form PCT/IB/308): _____.
 - ☐ is not required, as the application was searched by the United States International Searching Authority.
 - ☐ will be transmitted promptly upon request.
 - ☐ has been submitted by applicant on _____.
Date
 - ☐ is not transmitted, as the international search has not yet issued.
9. ☒ An Information Disclosure Statement under 37 C.F.R. 1.97 and 1.98:
- ☒ is transmitted herewith.
Also transmitted herewith is (are)
☒ Form PTO-1449 (PTO/SB/08A and 08B)
☒ Copies of citations listed
 - ☐ will be transmitted within THREE MONTHS of the date of submission of requirements under 35 U.S.C. 371(c).
 - ☐ was previously submitted by applicant on _____.
Date
10. ☐ An assignment document is transmitted herewith for recording. A separate

☐ "COVER SHEET FOR ASSIGNMENT (DOCUMENT) ACCOMPANYING NEW PATENT APPLICATION" or

☐ FORM PTO—1595
is also attached.
☐ Please mail the recorded assignment document to:
- ☐ the person whose signature and address appears below.
 - ☐ the following:
11. ☒ Additional documents
- ☒ Copy of request (PCT/RO/101)
 - ☒ International Publication No. WO 99/13949
 - ☒ Specification, claims and drawing
 - ☐ Front page only
 - ☒ Preliminary amendment (37 C.F.R. § 1.121)
 - ☒ Other FORM PCT/IB/308: TWO (2) SHEETS OF DRAWINGS (FORMAL)
12. ☒ The above checked items are being transmitted
- ☐ before the 18th month publication.
 - ☒ after publication and the article 20 communication, but before 20 months from the priority date.
 - ☐ after 20 months (revival).

NOTE: *Petition to revive (37 C.F.R. 1.137(a) or (b)) is necessary if 35 U.S.C. 371 requirements are submitted after 20 months.*

13. ☐ Certain requirements under 35 U.S.C. 371 were previously submitted by the applicant on _____ namely:
Date

AUTHORIZATION TO CHARGE ADDITIONAL FEES

WARNING: Accurately count claims, especially multiple dependent claims, to avoid unexpected high charges if extra claims are authorized.

NOTE: "A written request may be submitted in an application that is an authorization to treat any concurrent or future reply, requiring a petition for an extension of time under this paragraph for its timely submission, as incorporating a petition for extension of time for the appropriate length of time. An authorization to charge all required fees, fees under § 1.17, or all required extension of time fees will be treated as a constructive petition for an extension of time in any concurrent or future reply requiring a petition for an extension of time under this paragraph for its timely submission. Submission of the fee set forth in § 1.17(a) will also be treated as a constructive petition for an extension of time in any concurrent reply requiring a petition for an extension of time under this paragraph for its timely submission." 37 CFR 1.136(a)(3).

NOTE: "Amounts of twenty-five dollars or less will not be returned unless specifically requested within a reasonable time, nor will the payer be notified of such amounts; amounts over twenty-five dollars may be returned by check or, if requested, by credit to a deposit account." 37 CFR 1.26(a).

☒ The Commissioner is hereby authorized to charge the following additional fees that may be required by this paper and during the entire pendency of this application to Account No. 12-0425.

☒ 37 C.F.R. 1.492(a)(1), (2), (3), and (4) (filing fees)

WARNING: Because failure to pay the national fee within 20 months without extension (37 C.F.R. § 1.494(b)(2)), results in abandonment of the application, it would be best to always check the above box.

☐ 37 C.F.R. 1.492(b), (c), and (d) (presentation of extra claims)

NOTE: Because additional fees for excess or multiple dependent claims not paid on filing or on later presentation must only be paid or these claims cancelled by amendment, prior to the expiration of the time period set for response by the PTO in any notice of fee deficiency (37 C.F.R. 1.16(d)), it might be best not to authorize the PTO to charge additional claim fees, except possibly when dealing with amendments after final action.

☒ 37 C.F.R. 1.17 (application processing fees)

☐ 37 CFR 1.17(a)(1)-(5)(extension fees pursuant to § 1.136(a).

☒ 37 C.F.R. 1.18 (issue fee at or before mailing of Notice of Allowance, pursuant to 37 C.F.R. 1.311(b)).

NOTE: Where an authorization to charge the issue fee to a deposit account has been filed before the mailing of a Notice of Allowance, the issue fee will be automatically charged to the deposit account at the time of mailing the notice of allowance. 37 C.F.R. 1.311(b).

NOTE: 37 C.F.R. 1.28(b) requires "Notification of any change in status resulting in loss of entitlement to small entity status must be filed in the application . . . prior to paying or at the time of paying . . . issue fee...." From the wording of 37 C.F.R. 1.28(b): (a) notification of change of

status must be made even if the fee is paid as "other than a small entity" and (b) no notification is required if the change is to another small entity.

FIRE FIGHTING APPARATUS

BACKGROUND OF THE INVENTION

The invention relates to a fire fighting apparatus comprising a plurality of spray heads, a tube system for leading extinguishing medium from an extinguishing medium source having a volume for extinguishing medium to the spray heads, at least one drive gas source for driving extinguishing medium at a high pressure via the tube system to the spray heads and release means for activating at least one of the spray heads. Such fire fighting apparatuses are known e.g. from the International Patent Application with the publication number WO 92/22353.

Prior art fire fighting apparatuses comprise one container or a number of containers for extinguishing medium, the containers being positioned adjacent to each other and arranged to deliver extinguishing medium via a tube system to spray heads or sprinklers. The length and shape of the tube system depend on the application and the operating principle. Fire fighting apparatuses for bigger spaces, such as hotels, ships and industrial buildings, often have long tube systems.

The source of extinguishing medium of the fire fighting apparatuses in said applications can be e.g. the water mains, or a water container, from which water is pumped to the spray heads. Alternatively, the source of extinguishing medium can be a water bottle, to which is coupled a pressure gas bottle capable of driving the water (or another extinguishing medium) out of the bottle to the spray heads. Such a combination constitutes a hydraulic accumulator.

Long tunnels are technically particularly difficult spaces to extinguish a fire in. The tunnels can have a length of several kilometres - even some ten kilometres - and a diameter of e.g. 3 metres. The tunnels often contain cables. A cable fire may cause great damage. Extinction of a fire in such long tunnels is assumed to be so difficult to arrange for technically that, in most cases, the tunnels do not contain any fire fighting system at all. In case if the length of the tunnel is some kilometres and the intention is to lead extinguishing liquid, such as water, into the tunnel via a tube from one end thereof to a distance of some kilometres from said tunnel end, a drive pressure so high is required that, on account of pressure losses in the tube, it cannot be generated, in practice.

BRIEF DESCRIPTION OF THE INVENTION

The object of the present invention is to simplify the construction of such fire fighting apparatuses that are used for extinguishing fires in different major spaces and buildings and that are especially well suitable for use in long tunnels and the like. For this purpose, the invention is characterized in that
5 said at least one drive gas source is coupled to a long tube constituting part of the tube system in such a way that the tube together with said at least one drive gas source constitutes a hydraulic accumulator and the volume of the source of extinguishing medium is constituted by the volume of the tube at
10 least to a substantial extent. A long tube means in this connection primarily a tube having a length of the size of about 1 km and more.

An especially preferred embodiment of the invention is characterized in that a plurality of drive gas sources are arranged at a predetermined distance from each other along the tube. This embodiment suits particularly
15 well for fighting fires in tunnels, the tube being in such applications a substantially straight tube. Here, the tube system has been built into the tunnel in the longitudinal direction thereof and the tube is preferably divided into a number of main sections, each one containing a drive gas source. The main sections are preferably divided into a number of zones, each one containing a group of
20 spray heads or sprinklers. One group or several groups of spray heads or sprinklers are released at fire, when required.

Preferred embodiments of the invention are presented in attached claims 2 to 12.

An essential feature of the invention is to utilize the tube as a
25 source of extinguishing medium for a hydraulic accumulator. Another essential feature is to position a number of drive gas sources along the tube, whereby the pressure losses can be kept on an acceptable level, and to use the tube as the source of extinguishing medium. This is possible, because the tube is long and may contain a relatively big volume of extinguishing medium. No
30 separate liquid containers are needed for extinguishing liquid, when the tube is used as the source of extinguishing medium. The consumption of extinguishing medium will be small, when the spray heads used are of a type producing mist-like spray. Such a spray head is presented e.g. in the International Patent Application with the publication number WO 92/22353.

35 Thanks to the invention, a fire fighting apparatus has been provided which has a simple structure and installation and which is not dependent on

outer drive sources, such as electricity and pumps, and which, in addition, suits especially well for extinguishing fires in long tunnels. There is no need of separate sources of extinguishing medium, such as liquid bottles, and these can be omitted. The fire fighting apparatus is environment friendly when the
5 extinguishing medium is water-based liquid.

BRIEF DESCRIPTION OF THE DRAWING

In the following, the invention will be described by means of two embodiments with reference to the attached drawing, in which:

10 Figure 1 shows a tunnel containing a fire fighting apparatus according to the invention;

Figure 2 illustrates a drive source of the fire fighting apparatus;

Figure 3 shows a cross-section of the tunnel of Figure 1;

15 Figure 4 shows a tunnel containing another embodiment of the fire fighting apparatus of the invention;

Figure 5 shows the drive source for the fire fighting apparatus of Figure 4; and

Figure 6 shows a cross-section of the tunnel of Figure 4.

20 DETAILED DESCRIPTION OF THE INVENTION

Figure 1 illustrates a tunnel 1 for cables, in which tunnel is mounted a fire fighting apparatus according to the invention. The tunnel is e.g. 10 km long. A tube system is positioned in the tunnel 1 extending from one end thereof to the other end, the system comprising a long tube 2, from which extend shorter tubes 3a to 3e and 4a to 4e leading to spray heads or sprinklers
25 5a to 5e and 6a to 6e, respectively. The spray heads may be of the type presented in the International Patent Application with the publication number WO 92/22353 and having a k factor of 1,9. The spray heads have at least two, but typically a plurality of nozzles, which are arranged geometrically in relation to
30 each other in such a way and have such an opening and such a scattering angle that they produce a penetrating mist-like spray at high drive pressure. The consumption of extinguishing liquid is small in spite of that a long throw is achieved. The drive pressure is e.g. 70 bar.

The length of the tube 2 is divided into a number of zones A, each
35 of them having a length of 22.5 m. In Figure 1, a zone A has eight spray

heads, i.e. the spray heads 5b to 5e and 6b to 6e, the distance between the spray heads adjacent to each other being 7.5 m. The eight spray heads form a group of spray heads arranged to be released simultaneously in case of fire within the zone A. The upper spray heads 5b to 5e in the group are arranged to spray to the right along the tunnel 1, while the lower spray heads 6b to 6e are arranged to spray in the opposite direction. Because the spray heads 5b to 5e are arranged one after the other in Figure 1, the sprays intensify each other. This is also true of the spray heads 6b to 6e. In the vicinity of each spray head, a suction is built up by the spray head itself when spraying, said suction taking in the extinguishing medium that is sprayed out of the spray head positioned behind: for example, the suction at the spray head 5c takes in the extinguishing medium coming from the spray head 5b. The suction at the spray head 6e is capable of taking in part of the extinguishing medium coming from the spray head 5d, and the suction at the spray head 5b is capable of taking in part of the extinguishing medium coming from the spray head 6c, though these spray heads are directed in the opposite direction. In this way, a circulation of mist-like extinguishing medium is provided upon activating the spray heads, which medium extinguishes the fire effectively. Reference numerals 7a to 7e indicate solenoid valves, or another type of valves, making the spray heads be released in the group desired. Accordingly, the solenoid valve 7a controls the spray heads 5a and 6a; and the solenoid valves 7b to 7e control the spray heads 5b to 5e and 6b to 6e. Figure 1 shows a situation in which the spray heads 5b to 5e and 6b to 6e have been released, while the spray heads 5a and 6a in the adjacent zone have not been released. The maximum number of spray heads being released at a fire may e.g. be $8 + 4 + 4$, the spray heads existing in three adjacent zones A. At fire extinction, a demand for a 10 min extinction by means of four spray heads may be 47 l gas at a pressure of 150 bar together with 150 l water or water-based liquid. In case if the maximum number of spray heads, i.e. 16, are released during a time of 30 min, $3 \times 4 \times 150 \text{ l} = 1800 \text{ l}$ water is required. At the beginning of the spraying, the maximum pressure in the spray heads is kept at about 100 bar.

The reference numerals 8a and 8b indicate fire detector devices. These can be smoke detectors, detectors sensitive to heat or, in principle, any detectors giving a signal to the solenoid valves 7a to 7e. The fire detector 8a gives a signal to the solenoid valve 7a and opens this, while the fire detector 8b gives a signal to the solenoid valves 7b to 7e and opens these.

Figure 2 shows that the tube 2 comprises nitrogen bottles 9 to 12 and stop/opening valves 13 to 15 arranged in such a way that there always is one nitrogen bottle and one stop valve at the distance of 1 km. The nitrogen bottles 9 to 12, which together with the tube 2 form hydraulic accumulators, provide the extinguishing medium in the tube with a high pressure. The volume of the nitrogen bottles 9 to 12 is 50 litres and the pressure is 250 bar. The pressure loss in the tube 2 will be 133 bar at the maximum for the parameters stated. The loading pressure may preferably be within the pressure range of 30 to 400 bar, preferably 100 to 300 bar, depending on the length of the tunnel.

When the tube 2 is 10 km long and has an outer diameter of 25 mm and a wall thickness of 2.5 mm, the content of the tube will be about 3000 litres. Accordingly, the tube 2 contains about 3000 litres of water or water-based liquid, when the installation is in a standby state and the apparatus is ready to be released.

To begin with, the water in the tube 1 is obtained from a water mains 16 at a pressure higher than 3 bar. Reference numeral 17 indicates a filter and reference numeral 19 a valve enabling a filling of the tube 2. The valve 19 is open when the filling of the tube 2 with water is started. After the tube has been filled, the valve 19 is closed.

Figures 4 to 6 show another embodiment of the invention. Reference numerals used in the Figures 4 to 6 correspond to those used in the Figures 1 to 3 for the respective parts, an apostrophe being an extra addition. The embodiment of Figures 4 to 6 differs from the embodiment of Figures 1 to 3 therein that spray heads 5b' to 5e' in a group of spray heads or sprinklers to be released simultaneously are directed (orientated) differently. In the embodiment of Figure 4, a circulation of a mist of extinguishing medium is not provided, but all spray heads 5a', 5b' to 5e' spray downwards. It is conceivable that spray heads (not shown) are arranged downwards in the tunnel 1' to spray in the direction towards the spray heads 5e', 5b' to 5e' to provide a circulation of extinguishing medium, as described above. Another difference is that the tube 2' is arranged in a separate channel outside the tunnel 1'. A further difference is that only one solenoid valve 7' controls a whole group of spray heads 5b' to 5e' or sprinklers. From Figure 6 appears that the cross-section of the tunnel 1' is rectangular and from Figure 5 appears that the length of the tunnel is 3.6 km. No fire detector is drawn in Figure 4, though it

may exist, as described in connection with Figure 1. In case if 5b' to 5e' indicate sprinklers, i.e. spray heads with an ampoule being released by heat, the release of the group of sprinklers can be arranged to occur with any sprinkler of the group, whereby this releases the other sprinklers belonging to the group, preferably as described in the International Patent Application with the publication number WO 93/10860.

The invention is described above by means of one embodiment only, and therefore, it is pointed out that the details of the invention can be implemented in many ways within the scope of the attached claims. Accordingly, the length of the tube 2 may vary from the described one. In the application of the invention for extinguishing a fire in a tunnel, the tube length referred to is of the size of at least about 1 km and typically several kilometres, though a tube length of only some hundred metres can be actual in certain applications. It is conceivable that sprinklers, i.e. spray heads with separate release means, such as ampoules bursting at increased temperature, are possible instead of spray heads receiving a signal from a detector. Hereby, it is a sprinkler of a group of sprinklers in a zone (A) which makes the other sprinklers belonging to the zone be released. The fire fighting apparatus may comprise both sprinklers and spray heads, e.g. in such a way that a sprinkler is arranged in each zone (A) to release the spray heads existing in said zone. The length of the zones may vary as may the number of spray heads/sprinklers in the zones. Instead of nitrogen, the content of the gas bottles can be carbon dioxide, argon or another gas suitable for the purpose or a gas mixture at high pressure. The fire fighting apparatus may be installed in major spaces other than a tunnel, as was mentioned earlier.

CLAIMS

1. A fire fighting apparatus comprising a plurality of spray heads (5a to 5e, 6a to 6e; 5a', 5b' to 5e'), a tube system (2, 3a to 3e, 4a to 4e; 2', 3a', 3e') for leading extinguishing medium from an extinguishing medium source
5 having a volume for extinguishing medium to the spray heads, at least one drive gas source (9 to 12; 9' to 12') for driving extinguishing medium at a high pressure via the tube system to the spray heads and release means (8a, 8b) for activating at least one of the spray heads, **characterized** in that said at least one drive gas source (9 to 12; 9' to 12') is coupled to a long tube
10 (2; 2') constituting part of the tube system in such a way that the tube together with said at least one drive gas source constitutes a hydraulic accumulator and the volume of the source of extinguishing medium is constituted by the volume of the tube at least to a substantial extent.

2. A fire fighting apparatus according to claim 1, **character-**
15 **ized** in that a plurality of drive gas sources (9 to 12; 9' to 12') are arranged at a predetermined distance (l) from each other along the tube (2; 2').

3. A fire fighting apparatus according to claim 2, **character-**
ized in that a stop/opening valve (13 to 15; 13' to 15') for closing and open-
ing the flow of extinguishing medium in the tube (2; 2') is arranged between
20 individual drive gas sources (9 to 12; 9' to 12').

4. A fire fighting apparatus according to claim 2, **character-**
ized in that the tube (2; 2') is divided into a number of main sections (l), each of them containing a drive gas source (9; 9') having a high pressure.

5. A fire fighting apparatus according to claim 4, **character-**
25 **ized** in that the drive gas sources are constituted by nitrogen bottles (9; 9') having a pressure of 30 to 400 bar.

6. A fire fighting apparatus according to claim 4, **character-**
ized in that the main sections (l) comprise a number of zones (A), each of them containing a group of spray heads (5b to 5e, 6b, 6e; 5b' to 5e') or sprin-
30 klers.

7. A fire fighting apparatus according to claim 6, **character-**
ized in that release means (8a, 8b) are arranged along the tube (2; 2') within the zones (A) for releasing a group of spray heads (5b to 5e, 6b to 6e; 5b' to 5e') belonging to respective zone.

35 8. A fire fighting apparatus according to claim 7, **character-**
ized in that each group of spray heads (5b to 5e, 6b to 6e; 5b' to 5e') con-

tains a solenoid valve (7b to 7e; 7') to control at least one spray head belonging to the group (5b to 5e, 6b to 6e; 5b' to 5e').

9. A fire fighting apparatus according to any one of the preceding claims for being used in a tunnel (1; 1'), **characterized** in that the tube system (2, 3a to 3e, 4a to 4e; 2', 3a', 3e') follows the longitudinal direction of the tunnel (1; 1').

10. A fire fighting apparatus according to claim 9, **characterized** in that the spray heads comprise first spray heads (5b to 5e) arranged in an upper part of the tunnel (1) and second spray heads (6b to 6e) arranged in a lower part of the tunnel, whereby the first spray heads are arranged to spray mainly in the opposite direction with respect to the second spray heads.

11. A fire fighting apparatus according to claim 1, **characterized** in that the spray heads (5a to 5e, 6b to 6e; 5a' to 5e') are of a type capable of producing a mist-like spray.

15 12. A fire fighting apparatus according to claim 1, **character-**
ized in that the extinguishing medium is water-based liquid.
